### Proposed Solution Template:

| <b>S.NO</b> | <b>Parameters</b>                           | <b>Description</b>                                                                                                                                                                                                                                                                                                                                                    |
|-------------|---------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.          | Problem Statement<br>(Problem to be solved) | EHR data matched patient-reported data in 23.5 percent of records in a study at an ophthalmology practise. Patients' EHR data did not agree in any way when they reported having three or more eye health complaints.                                                                                                                                                 |
| 2.          | Idea / Solution description                 | Predictive analytics can create patient journey dashboards and disease trajectories that can lead to effective, and result driven healthcare. It improves treatment delivery, cuts costs, improves efficiencies, and so on.                                                                                                                                           |
| 3.          | Novelty / Uniqueness                        | Healthcare data frequently resides in several locations. from various departments, such as radiology or pharmacy, to various source systems, such as EMRs or HR software. The organisation as a whole contributes to the data. This data becomes accessible and usable when it is combined into a single, central system, such as an enterprise data warehouse (EDW). |

|    |                                       |                                                                                                                                                            |
|----|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 4. | Social Impact / Customer Satisfaction | Enhanced diagnosis<br>Improved medical treatment<br>Improved health results<br>Improved relationships with patients<br><br>More positive health indicators |
|----|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|

|    |                                   |                                                                                                                                                                                                                                                                                                        |
|----|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 5. | Business Model<br>(Revenue Model) | The two factors that have the biggest negative effects on hospital income are claim denials and patient incapacity to pay their part. 90% more uncollectible claim denials were written off by hospitals and healthcare systems in 2017 compared to the preceding six years.                           |
| 6. | Scalability of the Solution       | A variety of institutions must store, evaluate, and take action on the massive amounts of data being produced by the health care sector as it expands quickly. India is a vast, culturally varied nation with a sizable population that is increasingly able to access centralised healthcare services |
